REACH Declaration

Voltage Multipliers, Inc. based in Visalia CA, is a downstream user, in terms of the REACH regulations.

We manufacture and export exclusively non-chemical products to the EU. As an example, the exported amount of high voltage diodes and power supplies is below 1 ton. Based on this, VMI is not required to register or provide Safety Data Sheets (SDS).

Pre-registration is only applicable for manufacturers within the EU, so as VMI manufactures its products exclusively in the United States of America, pre-registration is not directly possible.

According to REACH regulations, our EU customers are thus considered as importers, and if necessary would need to register themselves. To our knowledge though, due to the reasons mentioned above, our customers are not obliged to register.

Should the situation arise where elements of our products (above a concentration of 0.1 percent mass) are considered mandatory for approval, we will promptly update information distributed to our customers.

Voltage Multipliers, Inc.

A handwritten signature in blue ink, appearing to read "Karen Holland", is written over a horizontal line.
